

The Myth of Sustainability: Life on a Runaway Planet

Presenter: Dr. Martin Auer,
MTU Dept of Civil &
Environmental Engineering

Date: Monday, Nov. 14

Time: 7:00 - 8:30 pm

Location:
G002 Hesterburg Hall
Forestry Building, MTU

**Presentation will be followed by
coffee, dessert and discussion.**

*Be Green –
Bring Your
Own Mug!*

Sustainability has become THE WORD in environmental affairs, reflecting a call to all of us to commit to preserving the planet for future generations. Some recent studies exploring the relationship between sustainability and the Earth's carrying capacity have reawakened predictions of a future of war, pestilence and famine. Environmental engineers and scientists have proposed ways to reduce environmental stress on the planet's carrying capacity.

*Can we engineer our way out of the approaching
doom via the Sustainability Revolution?*
